APPENDIX 23

QUESTIONNAIRE 24
Preface

This research would not have been possible without the generous financial support of Bikes Belong and Cycle Oregon. Travel Oregon provided oversight for the project and valuable review and recommendations throughout. In addition, several organizations provided valuable support of the data collection process, including the Bicycle Transportation Alliance, Oregon Bicycle Constructors Association, Oregon Bicycle Racing Association and the Portland Transportation Bureau. Our special thanks also go out to the many shops, manufacturers and other members of the bicycle industry that provided the data necessary to complete the research.
Summary

Bicycling and the bicycle industry are iconic in Oregon, representing a unique aspect of the state’s identity and economy. Because many bicycle industry businesses are small, and government statistics include bicycle manufacturing and other businesses only as part of larger categories, specific industry information is limited. This study provides basic data for the bicycle industry in Oregon, including its size and geographic distribution, the nature of its businesses, and their sales, employment and earnings.

For analysis purposes the industry is broken out into the following categories:

- Manufacturing
- Wholesale/Distribution
- Bicycle retail/service
- Sporting goods retail
- Big box retail
- Tour operation
- Event promotion, event services
- Industry representation

Industry Characteristics

- Retail/service businesses amount to over 400 outlets, including over 200 bike shops; Manufacturers total about 90
- About half of all bicycle industry businesses and organizations are located in the Portland Metropolitan Area; the Willamette Valley, Southern and Central Oregon are the next most significant
- Many bicycle industry businesses and organizations are relatively young – nearly two thirds opened since the year 2000; Manufacturers are the youngest on average, and retail and service business the oldest

Economic Significance

- The Oregon bicycle industry provides 2,645 jobs, counting both full and part-time employees as well as business owners that work in their businesses
- The majority of bicycle business and organization employment is located in the Portland metro area or the Willamette Valley, followed by Central and Southern Oregon
- Manufacturing and distribution employment in particular is located in the Portland metro area, with much of the remainder located in the Willamette Valley
- An analysis of bicycle industry employment density shows that Central Oregon is the leader, followed by the Portland metro area and the Gorge/Mt Hood region
- Total 2012 bicycle industry earnings estimated by this study amount to $83.3 million; Manufacturing/Distribution and Retail/Service are the largest categories

- Total 2012 bicycle industry sales amounted to $440 million, with the largest portions represented by Retail/Service establishments and Manufacturing/Distribution businesses

- Bicycle industry manufacturers sell only about 22% of their output in the local area, and export about 53% to other US locations and another 15% outside the US

**Growth Potential**

- Nearly a third of manufacturing/distribution businesses report “Substantial” opportunities for expansion; retail businesses are more moderately optimistic

- The three most important hindrances to business expansion are “Overall economic conditions,” “Competition” and “Can’t get adequate funding.” About a quarter report no hindrances to their expansion
I. Introduction

Bicycling and the bicycle industry are iconic in Oregon, representing a unique aspect of the state’s identity and economy. Bicycling and bicycle enthusiasts are targets for the state’s travel promotions, associated with the state’s desirable quality of life. In addition, the bicycle industry, as part of the outdoor gear and activewear industry segment, is one of the state’s and City of Portland’s economic development priorities.

Specific economic information for Oregon’s bicycle industry is limited however. Many bicycle industry businesses are small, and government statistics include bicycle manufacturing and other businesses only as part of larger categories. While some data are available at the national level on bicycle retail and service, specific figures for Oregon are limited due to small sample sizes.

This study provides basic data for the bicycle industry in Oregon, including its size and geographic distribution, the natures of its businesses, and their sales, employment and earnings. Because a survey was utilized for data collection, other aspects of the industry could be investigated as well, such as business intentions and hindrances to growth.

Bicycle Industry Identification

For purposes of this research it is necessary to identify those business and organizations that represent the industrial categories used to define the “bicycle Industry” in Oregon. The focus here is on businesses and organizations that directly involve bicycle manufacturing, sales, service, and use for a bicycle-specific activity. Organizations that represent various segments of these businesses for marketing or public relations purposes are also included. Government units, such as bicycle advocacy offices or transportation pools that include bicycles, are not included. The categories employed are as follows:

- **Manufacturing**
  - Bicycles, components, tools, painting, clothing, accessories

- **Wholesale/Distribution**
  - Including importing

- **Retail/Service**
  - Sales, repair; includes specialized shops as well as retailers that sell bicycles in addition to other items

- **Tour operation**
  - Paid group rides, travel or tours that include bicycle events

- **Event promotion, event services**
  - Bicycle races, shows, other short-term activities or events

- **Industry representation**
  - Bicycle oriented lobbying, public relations, marketing, member services
Other Includes certain bicycle-related services and ancillary products

For purposes of some data analysis the Manufacturing and Wholesale/Distribution categories are combined, as well as the Tour Operation and Event Promotion categories. For the former, survey findings indicated that the distinction between manufacturing and distribution is sometime difficult to discern – some companies report that they contract for some or all of their manufacturing out-of-state (including overseas) and function within the state largely as a distributor. Others may manufacture some items (which they also distribute) but in addition include other product lines for which they serve just as distributors.

The distinction between tour operation and event promotion was also difficult to make, for example when some respondents report that they promote bicycle tours but classified their activity in the survey as event promotion. In addition the number of businesses in these categories is small, so combining the responses improved the size of the category.

Data collection

The research makes use of data from a variety of sources, including a bicycle industry inventory database assembled for purposes of characterizing the industry in Oregon, and a survey that gathered data not available from any other source.

Bicycle industry database

An inventory was assembled of all businesses and organizations in the categories above that have a business location in Oregon, including both for-profit and not-for-profit entities. Government agency or agency components are not included. Similarly, companies or organizations that are active in the state but do not have a business location here, such as certain tour companies, distributors and advocacy organizations, are not included.

Data were assembled from a number of sources, including:

- Membership and contact lists provided by the Bicycle Transportation Alliance
- The Oregon Bicycle Constructors Association’s member list
- The Bicycle Retailer & Industry News 2013 Industry Directory
- Mountain Zone’s online list of bicycle shops
- The Portland Transportation Bureau’s online list of bicycle shops
- The Interbike trade show’s list of attending retailers
- The bike shop inventory from RideOregonRide.com
- Company-specific listings for multi-location companies, Big Box and Sporting Goods outlets in particular
• Web based research covering all regions of Oregon, including online listings such as Yelp, Manta and Yellowpages

The database includes a street address as well as an email address, if available. The former is used to establish the location of the business or organization with respect to the geographic regions of the state.

The resulting database is used to represent the bicycle industry in Oregon as of early 2013. Entries total 542 businesses and organizations, counting each outlet of multiple outlet businesses separately in the region in which it is located.

Industry survey

A survey was used to gather descriptive data on the industry as well as selected trends, perceptions and attitudes of industry members. The survey sample consisted of all businesses and organizations in the database other than sporting goods stores and big box retailers, which were contacted separately.

A self-administered questionnaire was prepared and reviewed in draft with Travel Oregon staff, representatives of the Bicycle Transportation Alliance and the Oregon Bicycle Constructors Association, and several Portland-area business owners, then formatted on Survey Monkey for direct access by the sample. A copy of the questionnaire is included in the Appendix.

An introduction letter and request to participate – with the associated link – was prepared and distributed by email to all those in the database for which an email address was available. A letter including a link was sent to the remainder via mail. In both cases the Travel Oregon letterhead was used. In addition the letter and link were provided to several bicycle membership and advocacy organizations for inclusion in their newsletters and other distributions.

A sample of sporting goods stores was contacted by telephone and asked a portion of the questions on the questionnaire, focusing primarily on the data necessary for the economic analysis. Locally owned sporting goods stores are reasonably well represented in the data. Attempts to gather data representing stores owned outside Oregon, such as Big 5 and Dicks Sporting Goods, were only partially successful – corporate offices were unwilling to provide data and only a portion of Oregon outlets would provide summary information. Employment and other estimates were made for this research on the basis of the data available. Good data were generously provided by REI.

Attempts to gather data from either local outlets or corporate offices of large mass market and discount retailers (“Big Box” outlets) were unsuccessful. For these businesses information provided by GDS, a data services firm familiar with the bicycle industry, was used to prepare estimates.
The survey sample for the email and mailed businesses and organizations amounted to 325 businesses and organizations. Respondents total 132, representing an overall response rate of 40.6%. Data gathered by telephone and from industry sources is used to represent sporting goods and big box retailers and is in addition to these amounts.

Other data for the research were gathered from US Census and Oregon agency sources.
II. Bicycle Industry Characteristics

Industry Composition

Retail/Service businesses are the largest component of the Oregon bicycle industry, totaling over 400 outlets throughout the state. The list includes over 200 bike shops and similar businesses plus a number of big box and sporting goods establishments. See Figure II-1. Manufacturers total about 90, followed by smaller numbers in the other categories.

For this inventory, those outlets that sell primarily bicycles, components, accessories, clothing etc., and which may provide bicycle service are placed in the Retail/Service category. Those businesses that sell or service bicycles as well as other items are placed in the Sporting Goods category, unless they are a major mass retailer that sells bicycles and bicycle-related items, in which case they are considered Big Box retailers. For example, Costco, Fred Meyer, Kmart, Wal-Mart, Target and Toys R Us are in this category. Tour and Event Promotion companies are shown separately here – as classified for purposes of the business and organization inventory – but are combined for subsequent survey data analysis.

Mass market retailers are an important consideration in that they tend to sell many of the children’s and low cost bicycles that are available on the market, and also sell accessories. According to recent National Association of Bicycle Dealers data, of all bicycles sold, about 70% have wheels 20 inches or larger, a common definition of a youth or adult bicycle. The remainder is primarily for young children and most often are sold at mass market establishments.
Location

A substantial portion of all bicycle industry businesses and organizations are located in the Portland Metropolitan Area, amounting to 262 or about half of all such entities in Oregon. The Willamette Valley, Southern and Central Oregon follow. See Figure II-2.

![Figure II-2](Bicycle Industry Business and Organization Location)

Location varies markedly with respect to the category of business. Figure II-3 shows that the preponderance of Manufacturers/Distributors are located in the Portland metro area and the Willamette Valley. Retail/Service businesses are distributed more widely, but still concentrated in Portland and the Willamette Valley (Figure II-4). Sporting Goods and Big Box retailers, however, are disturbed more widely, illustrating that, outside Portland and the Willamette Valley, bicycle retail is more likely to be represented by stores that combine sporting equipment – such as winter sports in Central Oregon – or by mass market retailers.

Organization

Except for Sporting Goods stores and Big Box retailers, the bicycle industry is most represented by a LLC (Limited Liability Corporation) at nearly half overall (48%). Corporations follow at 23%, then sole proprietorships at 21%. This pattern corresponds to the relatively small size of many companies in Oregon’s bicycle industry.

Among Manufacturing/Distribution companies, two thirds are LLCs, with many of the remainder being for-profit corporations. See Figure II-5. Retail outlets are distributed fairly evenly between sole proprietorships, LLCs and for-profit corporations.
Only 10% of respondents report that they represent an out-of-state business or organization. Recall that these figures do not represent the large sporting goods and big box retailers included in the inventory, all of which are branches of out-of-state corporations.
Age

Many of these businesses and organizations are relatively young, with nearly two thirds (64%) opening in the year 2000 or more recently. See Figure II-6. A strong growth pattern in the industry from the 1980s is very apparent, with growth continuing to the present.

Manufacturing/distribution companies are the youngest on average, about 11 years old. See Figure II-7. Retail/Service businesses average about 19 years old, with Tour/Event
businesses averaging about 13. In all cases these averages represent a wide range, from very new to well established.

Figure II-7
Average Business/Organization Age

![Average Age Bar Chart]

**Manufacturer’s product distribution**

Bicycle industry manufacturers in Oregon are most likely to build bicycle frames or complete bicycles, as shown in Figure II-8. Figures do not include Big Box and Sporting Goods establishments. Clothing is the next most common, followed by drivetrain components and cargo racks. Note that these are multiple response categories so the total is larger than 100%. Many manufacturers provide products in more than one category.

Figure II-8
Manufacturer’s Product Distribution

![Product Distribution Bar Chart]

It is notable that 16% of manufacturers provide bicycle manufacturing tooling or equipment, illustrating the extent to which these businesses in Oregon are working at the most fundamental levels of product development and manufacturing service.
Other categories

Distributors who responded to the survey report handling a range of products, including frames, components, accessories and clothing. Event promotion organizations support a range of competitive and non-competitive activities ranging from shows and expos, races and organized rides. Data for these categories are too limited to report in numeric detail.
III. Economic Significance

The economic significance of the bicycle industry in Oregon is represented by the sales, employment and earnings that it provides to its owners and employees. The data collection for this research focused on employment – including owner operators – and is reported first.

Employment

Oregon bicycle industry employment amounts to 2,645 jobs, counting both full and part-time employees as well as those that work in their businesses. See Figures III-1 and III-2. For this analysis employment is included to the extent that it is attributable to bicycles or bicycle-related activity. All employment is included for bicycle Manufacturing/Distribution and Retail/Service business, as well as Tour/Event companies, Outreach organizations and those included in the “Other” category. Employment in these categories was estimated from the industry database assembled for this study and from survey findings that report full- and part-time employment for each category of business or organization.

Figure III-1
Oregon Bicycle Business and Organization Employment, by Category, 2012

For Sporting Goods stores and Big Box retailers, that employment which is attributable to bicycles is included, which for the latter in particular is a small proportion of their employment overall. These proportions were estimated for the Sporting Goods category using data that was available from the telephone survey conducted for this study. Information from GDS, a data services company that tracks the bicycle industry, was used to represent Big Box outlets. Employment figures for these categories also are based on the industry database assembled for this study.
The count of employees includes both full and part time employees, with seasonal employees weighted according to the months they work during the year so as to represent average annual employment of this type. Tables showing further employment detail appear in the Appendix.

Employment is predominately in Manufacturing/Distribution companies or in Retail/Service businesses that are oriented primarily to bicycle sales and service.

The majority of bicycle business and organization employment is located in the Portland metro area or the Willamette Valley, followed by Central and Southern Oregon. See Figure III-2. This is particularly true for Manufacturing/Distribution businesses, for which over three quarters of employees are located in the Portland area, with many of the remainder located in the Willamette Valley. See Figure III-3.

![Figure III-2](image)

Oregon Bicycle Business and Organization Employment, by Region

Retail and Service establishment employment is also concentrated in the Portland area and the Willamette Valley, but is distributed to a larger degree throughout Oregon than is the case for Manufacturing employment. See Figure III-4. Tour/Event company and Outreach organization employment is also concentrated in Portland and the Willamette Valley.

To some degree it is not surprising that the Portland metro area and the Willamette Valley are as dominant as business locations in the bicycle industry in that these are the locations of a large portion of the state’s population. An additional perspective is provided by Figure III-5, which shows the average number of bicycle industry employees per 1,000 households in each region of the state, which is a measure of the concentration or density of the industry in each area.
Central Oregon and Portland are similar, with somewhat over two bicycle industry employees per 1,000 households in each region, with Central Oregon showing the most concentration. The Gorge/Mt. Hood Region follows at about 1.9. This illustrates that while the Portland metro area has the largest number of bicycle industry employees, Central Oregon and the Gorge/Mt Hood areas also have similar concentrations of the industry relative to their population size. Southern Oregon and the Willamette Valley are similar with respect to bicycle industry concentration, showing about half the concentration of Portland and Central Oregon.
Earnings

Earnings of employees and business proprietors represent the primary benefit of the bicycle industry in Oregon. Total 2012 earnings amount to $83.8 million, with the largest portions provided by the Manufacturing/Distribution and Service/Retail categories. See Figure III-6. Businesses in both of these categories tend to hire relatively skilled individuals and offer primarily full time positions. Earnings are lower in the other retail categories due to a preponderance of part-time workers and somewhat lower pay scales. Tour/Event businesses tend to hire relatively large proportions of part-time and/or seasonal workers, corresponding to the schedule of the events and activities they promote.
Average employment in the various bicycle industry categories is strongly affected by the extent to which business or organizations make use of part time and/or seasonal employees. Figure III-7 shows the proportion of employment that is full time for the four categories for which data are available from the survey conducted for this study. Manufacturing/Distribution businesses employ the highest proportion of full time employees, nearly eight out of ten. Bicycle Retail/Service businesses employ about six out of ten, followed by Sporting Goods stores, employing about three full time employees out of ten. Tour/Event companies make extensive use of part-time and seasonal employees, with fewer that one out of ten being full time.

Average wages for each industry category are estimated using US Census or Bureau of Economic Analysis data on employment and earnings for Oregon. Specific data for Bicycle Manufacturing establishments are available in the most recent US Census of Manufactures, 2007. These data are used with an adjustment for inflation to the year 2012. For other industries more recent employment and earnings data from the US Bureau of Economic Analysis (BEA) are used to characterize the industry categories in this study. In all cases the BEA data are available only for more general industry categories. For example, Bicycle Retail and Service businesses are included as part of a Retail Sales category. Similarly, Sporting Goods establishments are reported in a category that also includes Hobby, Book and Music stores. Average earnings estimates by industry category in this study were developed using the most appropriate data available.

Sales

Sales can be estimated for most bicycle industry categories, specifically Manufacturing/Distribution, Retail/Service and Tours/Events. Total 2012 sales in these categories amounted to $440 million, with the largest portions represented by Retail/Service establishments and Manufacturing/Distribution businesses. See Figure III-8.

Sales for each category of establishment are estimated from employment data and US Census data on sales for selected industry categories. Census data are for 2007, adjusted
here to represent 2012. In all cases the data available are for Oregon industry categories that are larger than those used in this study, as was the case for earnings data. Data for the larger category in which bicycle-related businesses are included are used to best represent sales characteristics for the categories used in this study.

![Bicycle Industry Sales, by Industry Category, 2012](image)

Compared to bicycle sales patterns for the US overall, bicycle sales in Oregon are more prominent in specialized bicycle retail businesses. In the US, 52% of bicycle sales occur in specialized shops ([http://nbda.com/articles/industry-overview-2012-pg34.htm](http://nbda.com/articles/industry-overview-2012-pg34.htm)), the comparable figure for Oregon is 72%. This reflects the depth of bicycle ownership and use in Oregon, in particular use of mid- and high-end equipment by adults for commuting and recreation.

**Customer base**

The location of a business’s customers indicates the extent to which they are connected with markets outside their immediate community and, to some degree, their maturity within their market segments. Findings are reported separately for Manufacturing/Distribution and for Retail/Service businesses; Big Box and Sporting Goods establishments are not represented in these data.

Manufacturers and distributors often export their products outside the community in which they are located, and Oregon’s companies in this category show this pattern. On average they sell only about 22% in the local area, and export about 53% outside the state and another 15% outside the US. See Figure III-9. Retail/Service businesses (Figure III-10) tend to be much more locally oriented, with 77% of their sales local, and 13% elsewhere in the US. Only 2% of this group’s sales are outside the US. Survey respondents were not given an explicit definition for the term “Local” and were free to use their own interpretation.
Tour/Event businesses are in between, reporting about 40% local sales, 28% elsewhere in Oregon, and 28% elsewhere in the US.

**Figure III-9**

Location of Sales, Manufacturing/Distribution Firms

- Local
- Oregon
- US
- Foreign

**Figure III-10**

Location of Sales, Retail/Service Businesses

- Local
- Oregon
- US
- Foreign

**Input sources**

Bicycle industry businesses were queried about sources for a variety of inputs, including materials, components and other requirements for manufacturing, or goods to sell in the case of retail outlets. Business inputs such as marketing, financial and legal services are also included. Manufacturers and Distributors are the most oriented to purchases from sources outside the US, buying about 29% of their inputs from foreign sources. Another 35% are from elsewhere in the US, and about 36% from a source in Portland or elsewhere in Oregon. See Figure III-11. Foreign purchases by Manufacturing/Distribution businesses would include components and frame construction materials.

Retail/Service outlets rely much more on sources within the US, purchasing about 56% of their goods from elsewhere in the US and another 36% from either Portland or elsewhere in Oregon (Figure III-12).
Tour/Event businesses are the most locally oriented, purchasing 79% of their inputs from either Portland or elsewhere in Oregon. See Figure III-13. These businesses provide primarily services, for which they hire predominately Oregon employees, and make use of equipment and supplies that are available in local market areas.
Figure III-13
Location of Purchases, Tour and Event Businesses

Local
Oregon
US
Foreign

Percent of Purchases
IV. Growth Potential

Expansion potential

The survey asked businesses to rate their overall expansion potential. See Figure IV-1. Big Box and Sporting Goods establishments are not represented in these data. Nearly a third (32%) of Manufacturing/Distribution businesses report “Substantial” opportunities for expansion, and only 27% reporting “Limited” or “None.” These are the response categories provided in the research questionnaire. Retail/Service businesses are somewhat less optimistic, with 23% reporting “Substantial” opportunities and 38% reporting “Limited” or “None.” Retail/Service businesses appear more mature in these data, which is consistent with their higher average age. Tour/Event companies tend to be modestly optimistic, with over half reporting “Modest” opportunity for expansion.

![Figure IV-1
Perceived Business Expansion Opportunity, by Type of Business](image)

Businesses were also asked whether they anticipated adding or reducing employment, which is a more direct measure of expansion opportunity. Manufacturing/Distribution businesses are the most optimistic, about two thirds (64%) reporting that they expect to add employees during 2013, and most of the remainder saying they expect no change. See Figure IV-2. Retail/Service businesses and Tour/Event companies are overall fairly optimistic as well, with nearly half saying they anticipate adding employees. About 10% of Retail/Service businesses say they expect to reduce employment.
**Hindrances to expansion**

A final question asked about hindrances to expansion, providing a number of potential responses. This was a multiple response question, so responses add to more than 100%. See Figures IV-3 through IV-5. Overall the three most important hindrances are “Overall Economic Conditions,” “Competition” and “Can’t Get Adequate Funding.” About a quarter of respondents report no hindrances to their expansion.
Retail outlets were most likely to consider overall economic conditions as their primary hindrance, with manufacturers focusing relatively more on funding limitations.

Competition with other businesses appears to be much more important for Retail/Service businesses compared to Manufacturing/Distribution companies, which is consistent with the relative maturity of the retail segment.

**Figure IV-3**

**Hindrances to Expansion, Retail/Service Businesses**

![Graph showing hindrances to expansion for retail/service businesses.](image)

It is notable that the most common response for Tour/Event businesses is “None.” In all cases it does not appear that either labor availability or adequate business locations are considered very important.

**Figure IV-3**

**Hindrances to Expansion, Tour, Event and Other Businesses**

Questionnaire
1. In what year was your company founded? (If the company has been purchased, what year was the original company founded?)

Year: [ ]

2. Is your company or operation in Oregon part of a larger company that is located outside Oregon?

   - Yes
   - No

Please respond to all questions in terms of the business, organization or operation that is located in Oregon.

3. What is the legal form of the company or organization in Oregon?

   - Sole proprietorship
   - Partnership
   - Limited Liability Corporation (LLC)
   - For-profit corporation
   - Nonprofit corporation

4. What is the zip code of your primary location in Oregon?

   Zip Code: [ ]

5. What is the primary classification of your company or organization? (select one only)

   - Manufacturing (bikes, components, tools, painting, clothing, accessories)
   - Wholesale/Distribution (including importing)
   - Retail (sales, repair, etc.)
   - Tour operation (paid group rides, travel or organized tours)
   - Event promotion, event services, (races, shows, other short-term activities or events)
   - Industry representation, member services, lobbying, public relations, marketing, web, graphics
